

AMENDMENTS TO THE CLAIMS

Please amend Claims 1, 2, 9, 17, 20, 21, 24, and 26, and cancel Claim 16 without prejudice or disclaimer. Claims 3-8, 10-15, 18, 19, 22, 23, and 25 remain as previously pending.

1. (Currently Amended) A system for assisting a user in selecting an operating system for use on an electronic device, system comprising:

an electronic device configured to store, display, and ~~process-process~~ information;

program code running on said electronic device, the program code configured to perform ~~[[the]]a~~ method comprising:

providing ~~an interactive menua graphical user interface~~ on a display, said ~~menu-display~~ comprising a list of operating systems available to run on said electronic device;

providing an activatable control mechanism for selecting one of the operating systems displayed on said menu; and

setting a default operating system for a load utility installed on said electronic device to ~~[[an]]the~~ operating system selected with the activatable control.

2. (Currently Amended) The ~~user-interfacesystem~~ of claim 1, wherein the program code further implements a mechanism to allow a user to set a duration of time comprising a time out period during which the load utility pauses and allows a user to specify an operating system other than the default operating system.

3. (Original) The system of claim 1, wherein the program code further comprises a mechanism to cause the electronic device to restart, said mechanism for causing the electronic device to restart being executable by a user.

4. (Original) The system of claim 3, wherein the mechanism for causing the electronic device to restart is automatically executed if the default operating system is changed.

5. (Original) The system of claim 1, wherein a change of the default operating system causes a file containing settings for a boot menu to be modified wherein the file specifies the operating system selected.

6. (Original) The system of claim 1, wherein the program code additionally comprises a mechanism for uninstalling the program code.

7. (Original) The system of claim 1, wherein the program code additionally comprises a mechanism for reinstalling the program code.

8. (Original) The system of claim 1, wherein an installation routine for installing the program code surveys the electronic device and determines the presence of operating systems available on said electronic device and the partition on which the operating system resides.

9. (Currently Amended) A method of specifying an operating system of choice, comprising:

displaying ~~an interactive menu~~ a graphical user interface on a display, said display listing ~~[[the]]~~ available operating systems;

providing a selection mechanism for selecting an operating system of choice;

selecting an operating system of choice via said selection mechanism;

and

setting ~~[[the]]~~ a default operating system for a load utility installed on an electronic device to the operating system selected with the selection mechanism, said default operating system loading by default upon the next electronic device start up.

10. (Original) The method of claim 9, further comprising setting a duration of time comprising a time out period during which the load utility pauses and allows a user to specify an operating system other than the default operating system.

11. (Original) The method of claim 9, further comprising restarting the electronic device in response to an input made via an input device calling for the electronic device to restart.

12. (Original) The method of claim 9, further comprising causing the electronic device to restart automatically if the default operating system is changed.

13. (Original) The method of claim 9, further comprising providing a mechanism for uninstalling program code that performs displaying, providing, selecting, and setting.

14. (Original) The method of claim 9, further comprising providing a mechanism for reinstalling program code that performs the steps of displaying, providing, selecting, and setting.

15. (Original) The method of claim 9, further comprising surveying the electronic device and determining the presence of operating systems available on said electronic device and the partition on which the operating system resides.

16. (Canceled)

17. (Currently Amended) A graphical user interface for an electronic device displayed by a boot selection program for selecting an operating system, said graphical user interface comprising:

a first display region of a graphical user interface listing available operating systems; and

a second display region of the graphical user interface including a user activatable control to select one of the available operating systems, wherein a selected operating system is loaded by the electronic device upon a subsequent electronic device start up.

18. (Original) The user interface of claim 17, further comprising a third display region for initiating a command to restart the electronic device, said third region including user activatable controls to specify when the electronic device should restart.

19. (Original) The user interface of claim 17, wherein the interface is displayed upon clicking an icon of a boot.

20. (Currently Amended) A programmed electronic device for selecting an operating system comprising:

a memory for storing executable program code;

a processor for executing executable program code stored in said memory; and

executable program code stored in said memory responsive to a command to select an operating system from a list of operating systems displayed on a graphical user interface so as to set a selected operating system as [[the]] default operating system of a loaded utility resident on the programmed electronic device.

21. (Currently Amended) A method of specifying an operating system of choice, comprising:

displaying a graphical user interface on a display, said display listing [[the]] available operating systems; and

setting [[the]]a default operating system for a load utility installed on an electronic device to the operating system selected with the graphical user interface, said default operating system loading by default upon the next electronic device start up.

22. (Original) The method of Claim 21, further comprising setting a duration of time comprising a time out period during which the load utility pauses and allows a user to specify an operating system other than the default operating system.

23. (Original) The method of Claim 21, further comprising specifying an operating system of choice on an electronic device and comprising restarting the electronic device in response to an input made via an input device calling for the electronic device to restart.

24. (Currently Amended) A system for specifying an operating system of choice, comprising:

means for displaying a graphical user interface on a display, said graphical user interface identifying [[the]] available operating systems; and

means for setting [[the]]a default operating system for a load utility installed on an electronic device to the operating system selected with the graphical user interface, said default operating system loading by default upon the next electronic device start up.

25. (Original) The system of Claim 24, further comprising means for setting a duration of time comprising a time out period during which the load utility pauses and allows a user to specify an operating system other than the default operating system.

26. (Currently Amended) The system of Claim 25, further comprising means for restarting the electronic device in response to an input made via an input device calling for the electronic device to restart.
